

## Maths Challenge – Week 57

Welcome to week 57 of our weekly maths challenge, with problems and puzzles posed by Gordon Burgin, Andrew Holt, Rod Marshall, Ian Stewart and the [U3A Maths and Stats Subject Adviser](#) - David Martin.

If you would like to share your ideas on how to solve these puzzles please join our [learning forum](#) or discuss within your U3A and interest group. **Check back each week for the solutions** and let us know how you get on by contacting u3a office. New maths puzzles will go up onto the website every Thursday.

### Week Fifty-seven

#### Question 1.

Find three integers whose sum is 180 such that the first integer is three times the second integer and six times the third integer.

#### Question 2.

Mary is eight years older than John, and in exactly a year she will be twice his age. How old are they now?

#### Question 3.

A circular window has a square decoration hanging at its centre, supported by three thin chains:

The middle chain is 4" long and the two outer chains are each 6" long. How long is the side of the decoration?

#### Question 4.

Adding a two-digit number to its reverse (i.e., the two-digit number with the order of the digits reversed) gives a perfect square; and subtracting its reverse from the original two-digit number also gives a perfect square. What is the original two-digit number?
